No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ENZYME REGULATION: Inhibited by DFFA (DFF45).
SUBUNIT: HETERODIMER OF A 45 kDa AND A 40 kDa SUBUNIT.
SUBCELLULAR LOCATION: Cytoplasmic and nuclear.
ALTERNATIVE PRODUCTS: 4 isoforms; Alpha (shown here), Beta, and Delta; are produced by alternative splicing.
SIMILARITY: CONTAINS 1 CIDE-N DOMAIN.
                                                                                                    241

'I FUNCTION: Vimentins are class-III intermediate filaments found in various non-epithelial cells, especially mesenchymal cells.

'I SUBURT: HOMODILYMER

'I PTM: ONE OF THE MOST PROMINENT PHOSPHOPROTEINS IN VARIOUS CELLS OF MESENCHYMAL ORIGIN. PHOSPHORYLATION IS ENHANCED DURING CELL DIVISION, AT WHICH TIME VIMENTIN FILAMENTS ARE SIGNIFICANTLY REORGANIZED (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cricetulus griseus (Chinese hamster).

SUBUNIT: HOMOPOLYMER.
TISSUE SPECIFICITY: Highly expressed in fibroblasts, some expression in T and B lymphocytes, and little or no expression is Burkitt's lymphoma cell lines. Expressed in many hormone-independent mammary carcinoma cell lines.
Independent mammary carcinoma cell lines.
FIM: ONE OF THE MOST PROMINENT PHOSPHOPOTEINS IN VARIOUS CELLS MESENCHYMAL ORIGIN. PHOSPHORYLATION IS ENHANCED DURING CELL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 L; M14144; AAA61279.1; ALT_SEO.

"Characterization of the chicken vimentin gene: single copy gene producing multiple manas.";

Proc. Natl. Acad. Sci. U.S.A. 80:911-915(1983).

-I- FUNCTION: Vimentins are class-III intermediate filaments found in various non-epithelial cells, especially mesenchymal cells.

-I- SUBUNIT: HOMOPOLYMER.

-I- PTM: ONE OF THE MOST PROMINENT PHOSPHOPROTEINS IN VARIOUS CELLS OF MESENCHYMAL ORIGIN. PHOSPHORYLATION IS ENHANCED DURING CELL DIVISION, AT WHICH TIME VIMENTIN FILAMENTS ARE SIGNIFICANTLY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VIME_CHICK STANDARD; FALL CONTROL OF CONTROL

No. is the number of results predicted by chance to have a \mathcal{Q} score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                              Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a human DNA fragmentation factor, designated DFF40. Also described are: (1) a method of inducing apoptosis in a cell comprising providing the cell with DFF40 which results in apoptosis; (2) a method for inhibiting the growth of a cancer cell comprising contacting a cancer cell with a DNA fragmentation factor designated DFF40 under conditions permitting the uptake of the DNA fragmentation factor by the cell where the presence of the DNA fragmentation factor by the cell where the presence of the DNA fragmentation factor; and (b) a promoter active in the tumour cell, where the promoter is operably linked to the region encoding a DFF40 DNA fragmentation factor, under conditions permitting the uptake of the DNA fragmentation factor, under conditions permitting the identifying a modulator of DFF40; and (5) a method of producing a promoter tell; (4) a method of producing a nonly fragmentation factor. An expression construct encoding a functional DNA fragmentation factor. An expression construct encoding a promoter tell of the producing a promoter tell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a human DNA fragmentation factor subsof 40 kDa, designated DFF40. The specification also describes DFF40 is capable of inducing apoptosis, and may contain a nuclear localisation fragment. DFF45 acts as molecular chaperone to direct the folding of DFF40. Although all DNase activity is associated with DFF40, DFF activity only occurs once DFF40 is complexed with DFF45. The DFF polypeptides and polynucleotides are useful for inhibiting the growth of cancer cells, and for inducing apoptosis of cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Wang X,

DFF is a heterodimeric protein comprising 40KDa and 45KDa subunits. DFF45 acts as a molecular chaperone to facilitate the appropriate folding of DFF40 and acts as an inhibitor for DFF40. DFF40 and DFF45 are used in gene therapy. The modulators of human DFF40 activity are useful for inducing apoptosis and for treating hyperproliferative disorders such as restenosis, psoriasis, metastatic tumours, angiogenesis and benign and malignant neoplasias. They are also used for treating cancers of the brain (glioblastoma, astrocytoma, oligodendroglioma and ependymoma), lung, liver, spleen, kidney, lymph node, pancreas, small intestine, blood cells, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone marrow, blood, other tissue and multi-drug resistant cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying modulator of human DNA fragmentation factor 40, for treating cancer, involves contacting cell or cell-free composition comprising DFF40 with candidate substance and comparing apoptosis with control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Wang X,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 1; Fig 1; 52pp; English.

Active CPAN proteins can be used for identifying compounds which inhibit apoptosis. Inhibitors of apoptosis can be used therapeutically, e.g. where cells are damaged and the apoptotic pathway is initiated such as by heart attack or stroke. The inactive CPAN proteins can be used for identifying compounds which activate apoptosis. Compounds which activate apoptosis can be used for apoptosis can be used to treat tumours. The association of CPAN with a caspase-sensitive inhibitor suggests that when cells enter into apoptosis, the activation of caspases will trigger CPAN to become
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-JAN-1998;

Two ICAD's are specifically claimed: a long chain form (ICAD-L) and a short chain form (ICAD-S). ICAD and ICAD CDNA can be used in the prevention of cell death, and can be used as a research reagent for cell death. The present sequence represents mouse CAD which is used in the exemplification of the present invention.

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-FEB-2000; 2000US-0515126

The invent useful in developmental blology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-MAR-2000; 2000US-191637P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            homologue of the Aspergillus nidulans mitotic regulator, NIMA kinase. NIK1 is a serine/threonine-specific kinase and is thought to play a k role in cell-cycle events leading to the onset of mitosis. The complexes, their derivatives and NIK1 or NIK1-IP protein and DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               interacting proteins. The invention concerns purified complexes of NLK1 protein and a NLK1 protein interacting protein, where the interacting protein is chosen from TrkA, protein phosphatase lalpha, interacting protein is chosen from TrkA, protein phosphatase lalpha,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY92331-37 were isolated in a modified yeast two hybrid system using NNK1 protein as "bait". These are known sequences which are NNK1 interacting proteins. The invention concerns purified complexes of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB; AAA09307
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-303742/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides an antibody which reacts with a cleavage product of vimentin but not with the intact protein. This can be used to detect apoptosis, which may then be used as an indicator of the progression of diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, Basedow's disease and acquired immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody reacting with a cleavage product of vimentin but not with
the intact vimentin, useful for detecting apoptosis and the quantity of
cleavage product of vimentin or as a reagent for immunohistochemical
                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                         syndrome (AIDS).

                                                                                                                                                                                         The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of gene group comprising these genes. The expression profile or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABB57310 standard; Protein; 466

                                                                                                                                                                        Proteins AAW54349-W54364 are examples of proteins produced in the endometrium during the hyperplasia, adenocarcinoma or proliferative phase of the endometrium. The presence and quantities of these proteins can be detected using 2D gel electrophoresis comparison of cell lysates. The proteins can be used as biochemical markers to detect the phase of the endometrium and can be measured in body fluids, obviating the need for endometrial biopsies.
                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Biochemical markers of human endometrium - useful for, diagnosis of hyperplasia and adenocarcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1998-207057/18.

AAB29635 standard; Protein;
The invention relates to the human pollinosis-associated gene 795 which exhibits significantly reduced expression in the T-cells of individuals with high cedar pollen-specific ISE (Immunoglobulin E) levels. The gene was isolated from T-cells from individuals allergic to cedar pollen using the differential display method. Pollinosis-associated gene 795 has homology with the human vimentin gene. The invention also relates also relates to the protein encoded by pollinosis gene 795; to expression constructs and host cells comprising pollinosis-associated gene 795 nucleic acids; pollinosis-associated gene 795 primers and probes; antibodies against the protein encoded by the gene; methods of detection of pollinosis-associated gene 795 nucleic acids; and a method of diagnosis of allergic diseases via the detection of pollinosis-associated gene 795 nucleic acids; and a method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nagasu T, Su

Pollinosis-associated gene 795 is useful in the diagnosis of a lergic diseases and in the screening of drug candidates for the treatment of such diseases. The present sequence represents a protein encoded by human pollinosis-associated gene 795.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAU87694 standard; Protein; 466
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides an antibody which reacts with a cleavage product of vimentin but not with the intact protein. This can be used to detect apoptosis, which may then be used as an indicator of the progression of diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, Basedow's disease and acquired immunodeficiency
